                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Clone distribution: MGC clone distribution information can be found through the I.M.A.G.B. Consortium/LIML at: http://image.llnl.gov Series: IRAK Plate: 117 Row: b Column: 5
This clone was selected for full length sequencing because it passed the following selection criteria: Hexamer frequency ORF analysis, Similarity but not identity to protein.

Consortium/ILML at: http://image.llnl.gov Series: IRAK plate: 30 Row: i Column: 17
This clone was selected for full length sequencing because it passed the following selection criteria: Hexamer frequency ORF analysis, Similarity but not identity to protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Submitted (06-MAY-2002) National Institutes of Health, Mammalian Gene Collection (MGC), Cancer Genomics Office, National Cancer Institute, 31 Center Drive, Room 11A03, Bethesda, MD 20892-2590,

product was digested with Sfil and size selection was performed to exclude fragments <1.5kb.The Sfil-digested PCR product was cloned into distinct DraIII sites of pWR185-Ff13. XhoI sites just outside the DraIII sites can be used to isolate the cDNA insert. Libraries were constructed by oligo-capping method (Sugano et al., , Institute of Medical Science, University of

Sequence 17182, Application US/09621976

Sequence 17182, Application US/09621976

Patent No. 6639063

APPLICANT: Dumas Milne Edwards, J.B.

APPLICANT: Jobcart, S.,

APPLICANT: Joicdano, J.Y.

TILLE OF INVENTION: ESTS and Encoded Human Proteins.

FILE REFERENCE: GENSET.054PR2

CURRENT APPLICATION NUMBER: US/09/621,976

CURRENT FILING DATE: 2000-07-21

NUMBER OF SEQ ID NOS: 19335

SOFTWARE: Patent.pm

SEQ ID NO 17182

LENGTH: 159

Sequence 16050, Application US/09621976

Patent No. 6639663

GENERAL INFORMATION:

APPLICANT: Dumas Milne Edwards, J.B.

APPLICANT: Glordano, J.Y.

TITLE OF INVENTION: ESTS and Encoded Human Proteins.

FILE REPERENCE: GENSET.054PR2.

CURRENT APPLICATION NUMBER: US/09/621,976

CURRENT FILING DATE: 2000-07-21
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Score 47; DB 4; L

Sequence 2, Application US/09105542A

Patent No. 6323329

GENERAL INFORMATION:

APPLICANT: Bullerdiek, Jorn

TITLE OF INVENTION: HIGH MOBILITY GROUP PROTEINS AND USES THEREFORE

TITLE OF INVENTION: HIGH MOBILITY GROUP PROTEINS AND USES THEREFORE

TILE REFERENCE: BOEHM4.001015.542A

CURRENT APPLICATION NUMBER: US/09/105,542A

CURRENT APPLICATION NUMBER: PCT/DE96/02494

PRIOR APPLICATION NUMBER: PCT/DE96/02494

PRIOR FILING DATE: 1996-12-20

NUMBER OF SEQ ID NOS: 23

SOPTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO. 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

Patent No. 5952486
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: BLOKEBERG, Leonard N., HAVUKKALA, Ilkka
APPLICANT: and GRIERSON, Alastair W.
TITLE OF INVENTION: MATERIALS AND METHODS FOR
TITLE OF INVENTION: THE MODIFICATION OF PLANT LIGNIN CONTENT
NUMBER OF SEQUENCES: 88
CORRESPONDENCE ADDRESS:
ADDRESSEE: Law Offices of Ann W. Speckman
STREET: 2601 Elliott Avenue, Suite 4185
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Length 1460;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Length 1460;
